

Pre-action decision wrapper

For AI product vendors selling into enterprise workflows

Decision artifact != execution authority

LimFlex returns the artifact; the host product executes, withholds, or routes.

Where it sits in the runtime

Model draft

AI proposes output.

LimFlex check

Evidence / authority / policy.

Decision artifact

State + reason + route.

Host decision

Execute / withhold / route.

Builder view

Input payload

draft + context + evidence refs + policy id

Output artifact

Allow / Hold / Review / Block + reason + missing evidence + next route

Controlled config

policy_id points to vendor-controlled workflow policy/config

Failure mode

missing evidence becomes Hold or Review, not silent approval

Decision states

Allow

Checks pass.

Hold

Evidence missing.

Review

Human approval.

Block

Policy / authority fails.

Material actions only

Use before money movement, access change, record update, or external release.

Public concept only. Formal evaluation, commercial terms, and confidential details require a separate process.
